Block quotes are also supported:

How an actual quote should be defined. Blockquote tags should only be used for ‘quoted’ content, because they are presented from paragraphs by screen readers.

Inline math, such as $e^{\pi i} = -1$, is possible.

Formulas in their own environments also work in the usual way:

$$P(A|B) = \frac{P(B|A)P(A)}{P(B)} \tag{1}$$
